

°hide-out ^{NEW}

Hide-out is a 24 Vdc recessed track system which offers a great flexibility in terms of moving around the LED lighting fixtures 'nook' and 'tag' since they don't have a power cable. This means that any person can move the lighting fixtures since there is no need of connecting wires. The lighting fixtures have a hinge system which makes that you can hide them inside the ceiling or pull them out. Optionally available with indirect ambient lighting. Hide-out is available in black and white.
